Professional Summary

Software Engineer with three years of experience building and supporting MRI software platforms at Siemens Healthineers. Experienced in translating requirements into technical solutions, collaborating with cross-functional teams, and supporting feature delivery across the software development lifecycle. Skilled in analyzing complex system behavior, prioritizing issues based on customer impact, and driving release readiness through close coordination with development and QA teams. Strong foundation in software engineering, stakeholder collaboration, and problem-solving. Seeking to transition into Product Management roles that combine technical depth with customer-focused product development.

Experience

Siemens Healthineers, Bangalore

July 2023 – Present

Software Engineer

- Designed and developed software components for MRI platform infrastructure, including cybersecurity solutions, software update orchestration, and license-based feature enablement systems.
- Built backend services and multithreaded workflows in C# to support reliable operation across distributed MRI environments.
- Collaborated with architects, developers, testers, and domain experts to translate business and system requirements into scalable technical solutions.
- Defined requirement keys, clarified feature behavior, and partnered with QA teams to improve validation coverage and release quality.
- Owned feature delivery across the software development lifecycle, including design, implementation, integration testing, deployment, and production support.
- Investigated production issues using logs, telemetry, and debugging tools, enabling teams to prioritize fixes based on customer impact and operational risk.
- Coordinated with cross-functional teams during release cycles to ensure feature readiness and successful software deployments.
- Developed and maintained Azure DevOps CI/CD pipelines to automate testing and improve release reliability.
- Integrated software components across distributed systems, ensuring stable communication and platform reliability.
- Participated in Agile ceremonies including sprint planning, backlog refinement, estimation, and release discussions.

Siemens Healthineers, Bangalore

Feb 2023 – June 2023

Technical Intern

- Performed cybersecurity assessments and vulnerability analysis for healthcare software systems.
- Developed automation solutions to support security validation and software quality initiatives.
- Collaborated with engineering teams to identify risks and support secure software delivery.

Education

The National Institute of Engineering, Mysore

Bachelor of Engineering, Electronics and Communication Engineering

2019 – 2023

CGPA: 8.34

Projects

AI for Bharat Hackathon (2026) — Top 100 Team — Full-Stack Agricultural Intelligence Platform

- Built a cloud-native post-harvest orchestration platform to help farmers make informed decisions across storage, transportation, and crop sale stages.
- Designed and developed a full-stack web application hosted on AWS, providing end-to-end visibility into the post-harvest supply chain.
- Integrated AI-driven crop price prediction models to forecast market trends and support optimal selling decisions.
- Developed workflow orchestration capabilities connecting harvest planning, storage recommendations, logistics coordination, and market intelligence into a unified platform.
- Collaborated with a cross-functional team to define requirements, prioritize features, and deliver a functional prototype within hackathon timelines.

Electrocardiogram Pulse Wave Analysis for Holistic Cardiovascular Assessment — IEEE Conference Paper (2024) Publication

- Co-authored and presented a research paper on non-invasive cardiovascular health assessment using pulse wave analysis and machine learning techniques.
- Developed an approach for analyzing wrist pulse characteristics, including waveform shape, intensity, and frequency, to identify potential health conditions.
- Applied machine learning and pattern recognition techniques to classify cardiovascular health indicators using pulse data collected from portable sensing devices.
- Leveraged healthcare datasets to improve model accuracy and enhance the reliability of health condition predictions.
- Published findings at the IEEE Conference on Interdisciplinary Approaches in Technology and Management for Social Innovation (IATMSI 2024), demonstrating the integration of traditional diagnostic concepts with AI-driven healthcare solutions.

Ultrasonic Spatial Mapper

- Developed a 2D spatial mapping system using ultrasonic sensors and microcontrollers.
- Gathered functional requirements and translated them into system design and implementation.
- Processed sensor data to detect obstacles and generate spatial representations of surrounding environments.

Leadership Experience

Chairperson, UCSP Club, The National Institute of Engineering

Oct 2021 – Jun 2022

- Led cross-functional teams across technical, marketing, and editorial functions to organize flagship events including Codezilla, Git Workshops, Web Development Workshops, and student training programs.
- Managed event planning, stakeholder coordination, budgeting, and execution for multiple technical initiatives, improving participation and operational efficiency.
- Introduced initiatives that strengthened the club's financial sustainability while significantly increasing student engagement, outreach, and community participation.
- Coordinated volunteers and student leaders to deliver workshops and knowledge-sharing sessions across diverse technical domains.

Certifications & Courses

- **AI-First Product Management Cohort – Airtribe**

16-week intensive program covering Product Strategy, User Research, UX Design, Product Analytics, PRD Writing, Go-To-Market Strategy, and AI-powered Product Management workflows.

- **The Joy of Computing using Python – NPTEL (SWAYAM), Indian Institute of Technology Madras**

Skills

Programming Languages: Python, C#, Java, JavaScript, TypeScript

Technical: Backend Development, REST APIs, Multithreading, Distributed Systems, System Design, Full-Stack Development, System Integration

Product Management: Product Strategy, Product Discovery, User Research, Requirements Gathering, PRD Writing, Feature Prioritization, Roadmapping, Product Analytics, Competitive Analysis, Go-To-Market Strategy,,Release Coordination, SDLC

AI & Data: Predictive Analytics, Machine Learning Fundamentals, Data Analysis, Feature Engineering

Cloud & DevOps: AWS, Azure DevOps, CI/CD Pipelines, Git, YAML

Operations: Root Cause Analysis, Log Analysis, Production Troubleshooting, Telemetry Analysis

Domain: Healthcare Technology, Medical Software Systems, Cybersecurity

Languages

English, Hindi, Kannada, Telugu
